RUSSIAN

**yabloki (яблоки)**

SPANISH

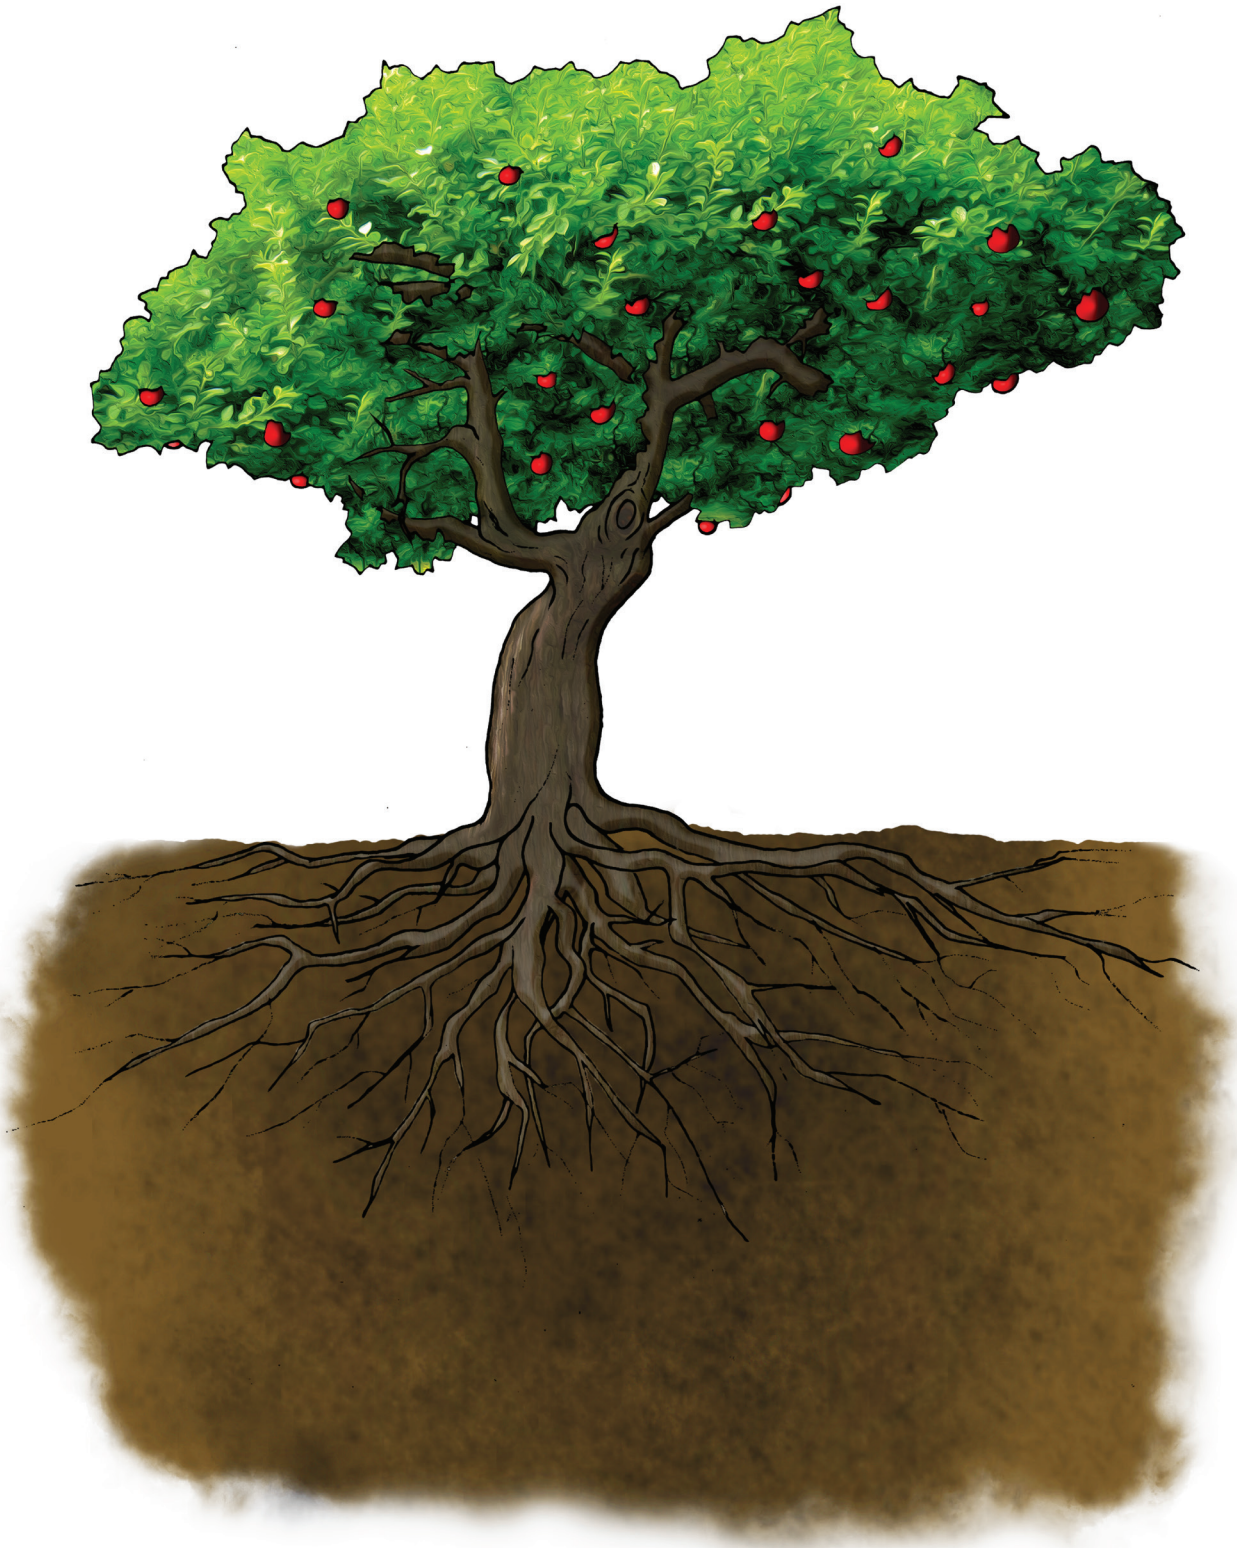

**manzanas**

VIETNAMESE

**táo**

There are many different varieties of apples. They come in different sizes and colors. You can eat red, green, yellow and even pink apples! Who has eaten an apple? What did it taste like? We can eat raw apples cut into slices or eat the fruit whole, one bite at a time!

# How do APPLES grow?

# How do APPLES grow?

Apples grow on trees! You can plant an apple seed in the ground and wait 10 years for a tree to grow. It is best to plant a small apple tree and wait for it to produce fruit. This can also take a long time! Apple trees will produce small white or pink apple blossoms before the apple fruit begins to grow.

What other fruits grow on trees?

**SAME BUT DIFFERENT  
APPLES**

**Fuji**

**Granny Smith**

**Honeycrisp**

There are different kinds of apples. Here are 3 kinds (point to each one as you say the name):

1. Fuji
2. Granny Smith
3. Honeycrisp

You can grow different kinds of apple trees in a backyard. Farmers can grow different kinds of apple trees in their orchards, too. Apples come in different colors, shapes, and sizes!
